Research Focus

Usable Privacy and Security | Human Computer Interaction | Natural Language Processing | Large Language Models and Generative AI |

Ph.D. candidate working at the intersection of natural language processing, human-computer interaction, and usable privacy. My research answers the question how can moderation systems detect offensive content in transliterated, non-standard writing without exposing the identities of non-offending users. I combine curated multilingual datasets, user studies and interviews, and large language models to build user-centered, privacy-preserving detection systems that protect people from both online harm and unwanted inference.
